TEAK FIELD GUIDE

Find anything, even by color.

Teak reads every card you save: the colors in an image, the words in a voice memo, the text inside a PDF. Type into the search bar and mix any of these.

Search by look

Colors and styles come from the image itself. No tagging needed.

`orange` `teal`	A dominant color
`#FF6B6B`	An exact hex match
`minimal` `dark`	A visual style
`pastel` `vibrant`	Mood of the palette

Narrow it down

Filters become removable pills as you pick them.

`type:image`	Only one card type
`#branding`	Cards with that tag
`site:dribbble.com`	Links from one site
`folder:"Moodboard"`	Inside a folder
`is:fav`	Only favorites

Find it by when

Dates match when you saved the card.

`today`	Saved today
`this week`	The last few days
`january`	A month
`last year`	A whole year

Find it by words

Titles, notes, AI summaries, transcripts and PDF text are all searchable.

`button hover`	Words anywhere in a card
`"design system"`	The exact phrase
`favorites`	Jump to a view
`trash`	Open Trash

Put them together

Every filter applies at once. Save any search as a smart folder and it keeps filling itself as you save.

`type:image orange`

Warm references for a moodboard.

`#typography this week`

Type ideas you saved lately.

`site:github.com "design system"`

GitHub links about design systems.
